

CASE STUDY

ABOUT WARDEN PARK ACADEMY

Warden Park Academy prides itself on having a strong and enviable tradition for high standards in academic achievement and excellence in sports, the arts and charitable community projects. Throughout the COVID-19 pandemic, Warden Park Academy used Wightman & Parrish to help stay protected against COVID-19.

PROBLEM

Warden Park Academy had large areas to sanitise between breaks to fight against the spread of COVID-19. This included touch points in Washrooms, Exam Halls, PE and Dance Studios and Food Tech areas.

SOLUTION

The dedicated Account Manager for Warden Park Academy suggested using the XtraProtect sanitiser. XtraProtect is proven to kill COVID-19, MRSA and E. coli, with just a two minute contact time, leaving an eight day residual protection.

Warden Park Academy began using XtraProtect in an Atomiser. These are a fast and efficient way to sanitise touch points. They also used XtraProtect in dispensers, which delivers the right amount to sufficiently cover hands.

RESULTS

Due to Wightman & Parrish's Client Manager's expertise on sanitising, XtraProtect was recommended quickly, making the Academy

protected against COVID-19. Based on the cost of cleaning chemicals versus the price of the XtraProtect sanitiser, Warden Park Academy estimate they saved between £3000 to £4000 in 2020.

Using XtraProtect has allowed Warden Park Academy to clean and disinfect all areas of the school quickly and safely, whilst protecting their students against the spread of COVID-19, helping to increase their hygiene, and decrease the amount of time and products used to disinfect the Academy.

“

The XtraProtect has been an absolute God send during the last few months! It has ticked all the right boxes for the school.

”

Dan Woolsey - Buildings and Facilities Manager
